**element width vs length, by depositional setting, river pattern, discharge regime**

true dimensions only

**element width vs length, by depositional setting, discharge regime, basin climate**

true dimensions only

Scatterplots of length vs width of architectural elements for groups of analogues classified on combinations of river pattern and depositional setting (top panel) and basin climate and discharge regime (bottom panel).

Shapes of data points indicate the depositional setting. Data on true measurements only (n = 4,573). NA indicates unclassified analogues.

AC: abandoned-channel fill, C: coal body, CH: aggradational channel fill, CR: crevasse-channel fill, CS: crevasse splay, DA: downstream-accretion barform, DLA: downstream-/lateral-accretion barform, FF: floodplain fines, HO: scour-hollow fill, LA: lateral-accretion barform, LC: floodplain lake, LV: levee, SF: sand-prone overbank, SG: sediment-gravity-flow body
