**channel–body net–to–gross distributions, by depositional setting, river pattern, discharge regime**

channel–body net–to–gross distributions, by depositional setting, basin climate, discharge regime

Boxplots and violin plots of distributions of net–to–gross ratios of channel bodies for groups of analogues classified on depositional setting and on combinations of river pattern and discharge regime (top panel) and basin climate and discharge regime (bottom panel).
Boxes represent interquartile ranges, horizontal bars median values (n = 239). NA indicates unclassified analogues
