channel–body thickness distributions, by depositional setting, river pattern, discharge regime

channel–body thickness distributions, by depositional setting, basin climate, discharge regime

Boxplots and violin plots of thickness distributions of channel bodies for groups of analogues classified on depositional setting and on combinations of river pattern and discharge regime (left) and basin climate and discharge regime (right). Boxes represent interquartile ranges, horizontal bars median values (n = 6,658). NA indicates unclassified analogues
